VW TRUSTS IN Banner EFB BATTERIES

DELIVERIES TO BEGIN IN JANUARY 2015.

The Banner formula for success, which combines product quality, strong brands, technical competence and reliability, recently again proved to be a winner during the allocation of a coveted major order.

For the first fitting of its innovative "Blue Motion" start/stop models, the Volkswagen Group has opted for Banner's enhanced flooded batteries (EFB) in the 69 Ah performance class. Banner is

to supply the VW works in Wolfsburg (Germany), Pamplona (Spain) and Palmela (Portugal), as well as the Audi works in Győr (Hungary) and the Seat plant in Martorell (Spain).

The large-scale order for EFB batteries represents the latest highlight in the long and successful teamwork between the Volkswagen Group and Banner, and is highly gratifying confirmation of the probity of our chosen corporate strategy.
